

COMPANY PROFILE

ABOUT US

Welcome to NINIVE Casseforme. The innovative, qualified and reliable manufacturer of steel formwork for bridges, plants for railway sleepers, tunnel lining forms and highly mechanized equipment for the precast industry established in 1980.

The experience and creativity of the founding partners, together with the new technologies and the modern production systems have been fundamental both for the development of our equipment and the introduction of products directed to new sectors. Since 1987 NINIVE Casseforme expanded its business over foreign markets and the technological innovation process has been improved by the cooperation with the major Construction Companies operating worldwide.

Those were eventful and busy years that gave substance to new ideas, patents and technologies which projected NINIVE Casseforme till becoming a leading company into the formwork world.

Nowadays NINIVE Casseforme is still a leading actor in important construction jobsites, and can boast among its customers many first level international firms, but NINIVE Casseforme is also the power of managers which have been able to see beyond the horizon and be ahead of their time, to give birth to a Company which has always pursued innovation, research and technological development. The soul and the heart of a Company that looks at the future with confidence and is ready to take up new challenges to meet, as usual, the needs of a demanding market that relies on quality and on the use of reliable formwork.

The close knit NINIVE Casseforme team, in spite of the diversified branches of competence, is well organized to face up the complexity of each field of activity.

ABOUT US

The trade name NINIVE Casseforme is today the hub for a plurality of backgrounds and skills to supply formwork for the main projects for infrastructures, both for roads and for railways as well as in the prefabrication field. A wide-ranging unit formed by the combination of diversified contributions fitting into each other as a whole, sharing an effective organizational model that offers to the market the unique value of its own technologies with qualified solutions and performances that meet the most exacting requirements. The power of NINIVE Casseforme stands in the achievement of a one goal policy and the central coordination of the staff, combined with the quality and specialization in each field of activity to always fulfill its Customer's requirements at best.

The state of art production system combined with the quality control and the inspection of both raw material and completed products, are the guarantee of reliability and worth of NINIVE Casseforme's name in the formwork field. A Company that never stops developing, researching and designing solutions that fulfill the complex requirements voiced by the market, with special emphasis on the technologies providing environment-friendly production systems. Our customers choose NINIVE Casseforme not only due to the technology of our production and the quality of our services, but also for the flexible approach in which we make ourselves available to them; this because we look at their requests with a positive attitude, we like to help them step by step toward their goals and we assist them until we see they are fully satisfied. In a nutshell the awareness to trust into a team of proven soundness and able to provide guarantee at all levels. this without losing contacts with our principles: high production technology, a constant research for innovating solutions, commitment to customer service and the ability to always stake our all.

ABOUT US

NINIVE Casseforme is the union of various top-rate levels of professional competence, synchronized with the overall company mechanism that sets off personal contribution within the general frame of operativeness. A team that stakes its all to fulfill your needs, making constant progress, spurred into action by the large number of goals to be achieved yet. We place our people at your service, so to be always ready to meet your requirements. The strength of our factories is their flexibility which allows us to fabricate specialized and tailor-made products meeting the specific requests of our Customers. The whole production cycle is supervised and monitored by qualified staff, helped by planning and management software packages to check each step of fabrication from the initial operation to the completed product.

Our production department has recourse to a testing and quality analysis laboratory, to perform inspection tests over both raw material (check of steel resistance) and final products (dimensional checks and NDT tests on welds). Each production lot undergoes the most restrictive routine tests to guarantee all the envisaged standard not only by the European standard Rules but also by the specific needs voiced by the Customer. At the end of the manufacturing process, the products are stored into dedicated areas. The Quality Control manager inspects the products and checks the handling stages until the goods are loaded and shipped toward the final destination. Innovation, quality and reliability are the passwords of the company that, currently, is a top-level reference point in several construction fields: from the formwork for bridges to the plants for railway sleepers, from the tunnel lining forms to the highly mechanized equipment for the prefabrication industry. All this is the word NINIVE Casseforme, a Company which has been able to track the road of innovation to provide equipment featuring a high technological value over the years, always ahead of its time.

FACILITIES

PRODUCTS

CONCRETE SLEEPERS

Self reacting formwork for

ROOF BEAMS

Formwork for prestressed roof beams of industrial buildings

BRIDGES

Formwork for precast or cast in place the deck of bridges

TUNNELS

Self reacting or conventional formwork for tunnel lining

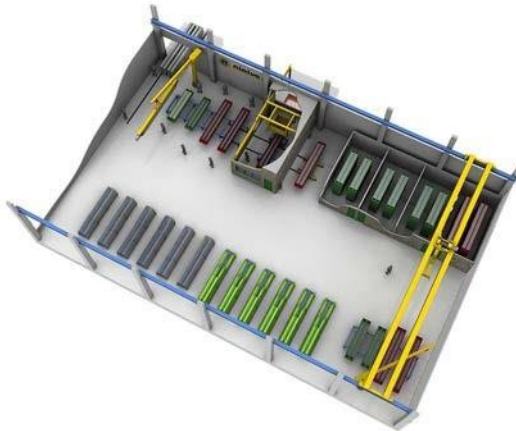

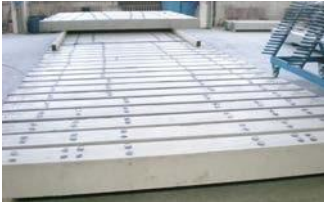

MONOBLOCK CONCRETE SLEEPERS

CONCRETE SLEEPERS FOR SWITCHES

SLAB TRACK
